

This is an old Funny Car Chassis which was built back in 1978. This chassis has gone over 200 mph in 7 seconds in the past !

I had some strengthening work done and a new roll cage built by a local chassis builder.

All the old paint removed and cleaned up, High build primer sprayed on with 3-coats of "two pack blue" top coat.

Engine and gearbox/ rear axle were all rebuilt

Engine is a 302 ci (5 ltr) Small Block V8

Gearbox is a Automatic Turbo 350 with a high stall convertor fitted.

Rear Axle is a cut down Oldsmobile with toughened half shafts, spool and 4.88 to 1 gear ratio

The body is a 1940 Fiat Topolino made of one piece fiberglass.

I designed the flames myself, all sprayed with two-pack paint

It took me around 5 months to restore this old race car

So far this year I've been doing shake down runs with it this year but the car should run the standing 1/4 mile in around 11.50 seconds @ 120 mph (I hope ?)
